

K-20 SLURRY ICE MACHINE

PERFECT COOLING FROM THE CATCHING MOMENT

From the moment the catch is on board the cooling process is the key to maximize the value. Kæling ehf. offers comprehensive cooling solutions for food and fishing industry from the catching moment to final processing.

Why use a slurry ice?

Slurry ice is one of the best cooling methods for catch available. Slurry ice completely surround all the catch and thus ensures more even and better cooling e.g. compared to traditional ice. Spots due to uneven cooling by ice flakes is a thing of the past. Slurry ice is easily pumped through pipes to the places of usage, whether it is on board or at processing stations on land.

Slurry ice used on board and ashore

The popularity of slurry ice is growing rapidly both on board fishing vessels and processing stations on land. Slurry ice is excellent for all catches from the sea and very good for variety of foods. The thickness of an slurry ice can vary from 15% to 40% of an ice concentrate. Thin slurry ice 15-20% is used in processing but thicker up to 40% when slurry ice is used for storing catch in tubs.

The K-20 Slurry Ice Machine at a glance

The K-20P can produce up to 5.770 liters of slurry ice per hour. The machine is equipped with a pre-cooler that ensures even performance at up to 20°C sea temperature. The salt content must be at least 2.6% NaCl. If needed salinity is not available, brine systems can be utilized. Sea usage at 15°C is up to 6.500 liters per hour and sea filtration 30 microns.

Technical specification

Capacity at 0°C sea temperature:	930 l/h. of 10% ice or 290 l/h of 40% ice
Pre-cooler:	Enables even capacity at sea temp. up to +15°C
Production at 0°C sea temperature:	9.700 kcal/h
Minimum salinity:	2,6 % NaCl
Operating power consumption:	11kW
Measurements in mm LxWxH:	1420x600x670
Weight:	340 kg
Refrigerant:	404A/449A
Sea filter:	30my
Sea usage at 15°C:	2.500 l/h

Compact equipment and flexible installation

The Slurry Ice Machine take up little space in terms of capacity and are assembled from independent units. The flexibility in installation is very good, in fact so good that The Slurry Ice Machines have always been installed in spite of limited space. Control panels for ice machines are computer controlled and with touch screen. Multiple control panels can be installed with each Slurry Ice Machine. It is common to have a control panel on a bridge and others on a working deck. Pipes are led from The Slurry Ice Machine to the place or places where there is use for the slurry ice.

Durability and reliability

The first Slurry Ice Machine from Kæling was installed in 2005 and all the machines that Kæling ehf. has installed and serviced are still in use. With regular service inspection and proper maintenance, the live time of the machines can be expected up to 25 years or even longer.

Kæling ehf. er leiðandi fyrirtæki á sviði kællausna fyrir sjávarútveg. Við vinnum stöðugt að því markmiði að viðskiptavinir okkar geti hámarkað aflaverðmæti með rétttri kælingu á öllum stigum. Kællausnir frá Kælingu hafa náð fótfestu bæði hér á landi og erlendis enda hafa þau staðið fyrir gæði, áreiðanleika, afköst, endingu og góða þjónustu.
